Worlddidac Members’ contribution to EdTech and Tech solution in Africa

Cloud based learning – access from anywhere at any time

ECL EDIBON Cloud Learning (E-learning) is an easy to use system that allows one or more EDIBON Teaching and Research units to be used by one or more students from different locations. ECL allows students to do the practical work from three possible locations, such as the laboratory, their home or from their smartphones.

This reduces costs significantly and allows access to high quality and innovative education without being able to afford to purchase many units. No need of money inversion in equipping laboratories in different centres. Trainees can run the experiments from their homes or schools in Africa.

The easy of use of the system, means that any worker, even the least qualified, can learn the technology in a safe, easy and simple environment. A 4G connection is enough.

E-learning, Distance and remote learning, Practical laboratories, Complete technical solution, “Value for money”, Industrialization, Equal opportunities, Innovative learning, Sustainability, Modernization
